

On Satisfaction:

I loved this class and could have spent all my time working on it and researching the concepts, history, and current events of the field. It was a valuable experience and will inform my studies and professional work. A+... Interesting subject matter. A pleasure to read and learn about. Definitely valuable. One of the few courses that caused me to think about the subject matter even when not working on classwork. Valuable educational experience. I don't know if everything taught can effectively be incorporated with real world problems, but it certainly gave me a new understanding of the natural world. I look at certain things with a new perspective. The course was interesting. I am new to the field; therefore, I learned a whole lot. 9 out of 10. I would recommend that this course is continued and I would recommend to others to take it.
