** Hanson-Clegg-Allen Endowed Chair, Agricultural Banking and Finance,
University of Nebraska–Lincoln.

Sincere appreciation goes to the panel members for their participation in the University of Nebraska-Lincoln 2018 Nebraska Farm Real Estate Market Survey. Without their valuable input, much of the information within this report would not exist.

Special appreciation also goes to Dr. Bruce Johnson who conducted the UNL Nebraska Farm Real Estate Developments Survey from 1978 until his retirement in 2013. His advice and insight have been critical to the success of the survey and report.

Recognition is also extended to Linda Tesch, Maddy Griep, and Roger Wilson for their significant contributions throughout the survey, report analysis, and publication process.

NOTE: This report is available at agecon.unl.edu/realestate

Disclaimer

The Nebraska Farm Real Estate Market Highlights 2017-2018 publication was created for educational purposes to provide insight on recent trends in agricultural land values and rental rates across Nebraska. Agricultural land values and rental rates in the report represent averages for different regions of the state. Actual agricultural land values or rental rates for an individual parcel in Nebraska will vary from reported figures depending on quality attributes and local market forces of the area.

Agricultural land values and rental rates for this publication were obtained by surveying expert panel members engaged in agricultural land and rental markets throughout Nebraska. The panel member's validity relies on their expertise and accuracy and the authors do not make any guarantees as to their qualifications or the reliability of their responses. While survey responses were examined to eliminate data that was obviously erroneous, no further effort was made to independently verify or corroborate the data.

Physical attributes such as location, soil type, topography, or depth to water may affect the value of a given real property causing the value to deviate substantially from what may be considered normal for the area. Also, local market forces such as the competitive nature of an area and local government policies such as restrictions on the use of water all have the ability to greatly impact agricultural land values or rental rates.

In addition, variations exist within reporting Districts that may cause real estate values and rental rates to differ substantially within the region. As an example, the North reporting district spans almost 200 miles from east to west. Precipitation in Nebraska decreases on average an inch every 25 miles a person travels west, resulting in a possible decline of eight inches from the eastern side of this district to the west. An eight-inch difference in precipitation for a semi-arid region will substantially change the value and rental rates for crop and range ground.

Due to the inherent limitations of this survey, some of which are listed above, information in this report should not be used to set a specific rental rate or value a particular parcel of real property for sale or property taxes, security for a loan, and other related legal matters.

Introduction

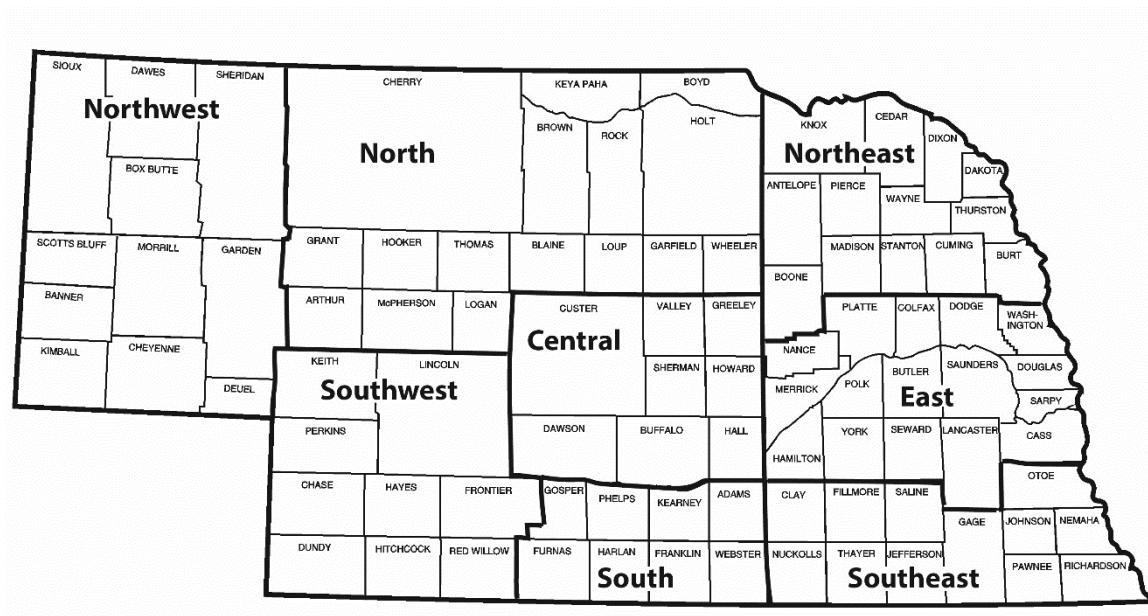

The Nebraska Farm Real Estate Market Highlights 2017-2018 report represents the 40th edition of the annual series. These reports provide an important insight on agricultural land market dynamics for stakeholders across Nebraska. In today's market, where market transactions exceeding one million dollars are the norm, objective market information and analysis is more critical than ever. The focus of the report is to provide unbiased information on agricultural land values and rental rates so industry participants can make educated and informed decisions.

This year, the February 2018 survey of nearly 120 expert-panel members from across the state provided current information and insight regarding the agricultural land market conditions in their areas. The panel members have been selected on the basis of being actively engaged in agricultural land markets as certified agricultural appraisers, professional farm managers, agricultural lenders primarily focused on agricultural land transactions, and other professionals engaged in the Nebraska agricultural land industry due to the inherent nature of their positions. The majority of panelists participating in the survey have reported annually for a considerable number of years which provides valuable historical consistency and context to the agricultural land values and rental rates provided.

Based on their knowledge of market activity, reporters provide point-in-time estimates of current agricultural land values and cash rental rates for a variety of land types and classes. Comparing these current measures against previous years' results provides important trend analysis. The appendix in this report includes: the historical University of Nebraska-Lincoln data series for Nebraska agricultural land values dating back to 1978, the agricultural cash rental rate series dating back to 1981, and the United States Department of Agriculture historical all-land value series.

In addition to the point-in-time estimates, panel members provide details regarding actual sales transactions which have occurred over the previous 12 months. This year the panel provided information on 505 sales which were considered representative of the recent agricultural land market. This gives insight into the characteristics of recent sales as well as benchmark indicators for studying trends. Changes in the nature of market participants engaged in land transactions from year-to-year may also be ascertained from evaluating this information.

Figure 1. Nebraska Agricultural Statistics Districts

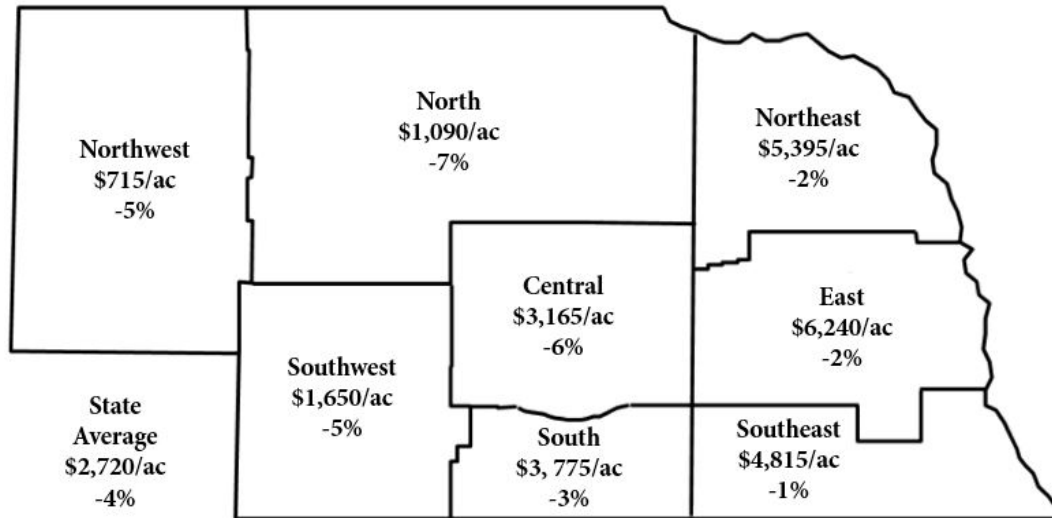

Nebraska has diverse land resource characteristics and agricultural patterns. Most of the market information is provided down to sub-state regions which are the Nebraska Agricultural Statistics Districts (Figure 1). Land within these regions share similar geographical attributes and production expectations. The districts provide greater geographically-appropriate detail that are not available from other data sources, such as quarterly value estimates from the Kansas City Federal Reserve, the USDA-Economic Research Service Annual Farm Value and Cash Rent series for the state as a whole.

Variability exists within these eight sub-state regions. Therefore, sub-state regions of values and cash rents appropriately may not necessarily reflect the conditions of any local market in that geographic area. Differences in local values and rents can range from small to extreme. The information and analysis to follow in the report is a more realistic measure of general patterns and trends. If information is needed for one specific parcel, the services of a certified agricultural appraiser or a professional farm management firm should be solicited.

2018 Nebraska Agricultural Land Values

For the fourth consecutive year, the all land average across the entire State of Nebraska for the year ending February 1, 2018 averaged about 4 percent lower than the prior year. Figure 2 summarizes these averages along with the percent changes over the prior year's all-land average for the eight districts of the state.

Figure 2. Average Value of Nebraska Farmland, February 1, 2018 and Percent Change From Year Earlier

Source: UNL Nebraska Farm Real Estate Market Surveys, 2017 and 2018.

- The state wide all-land average value for the year ending February 1, 2018 averaged \$2,720 per acre or about a 4 percent (\$100 per acre) decline to the prior year's value of \$2,820 per acre (Figure 2).
- Rates of decline in 2018 for the all-land average were low across Nebraska as all of the districts report losses in the single digits.
- In the western regions of Nebraska, including the Northwest, North, Central, and Southwest Districts these areas averaged around 5 to 10 percent lower for the all-land average. The Northeast, East, South, and Southwest Districts fell 1 to 3 percent.
- Panel members indicated crop prices and property tax levels as the most negative factors leading to the decline in the market value of land. Current farm finances and the resulting impact on the market value of land remain a concern in 2018 as farm input costs, future property tax policies, and the financial health of current owners also rated strongly negative.
- A bleak outlook for the future growth in the market value of land was noted by panel members as the 1031 tax exchange, non-farmer investor interest in land purchases, the amount of land offerings for sale and purchase for farm expansion measured negligibly positive.
- Based on 2018 market values, the estimated total value of agricultural land and buildings in Nebraska fell to approximately \$126.4 billion. Appendix Table 1 gives a historical perspective on the estimated market value of land and related buildings in the state. Between 2017 and 2018, the decline in agricultural land and building values totaled about \$4.6 billion.

Table 1. Average Reported Value of Nebraska Farmland for Different Land Types by Agricultural Statistics District, February 1, 2018^a

Type of Land and Year	Agricultural Statistics District

Source: ^a UNL Nebraska Farm Real Estate Market Surveys, 2017 and 2018.

^b Value of pivot not included in per acre value.

^c Weighted averages.

- The Nebraska all land average price of \$2,720 per acre marks a 4 percent decline from the prior year (Table 1). The state-wide Nebraska all land average peaked at \$3,315 per acre in 2014 and subsequently declined 18 percent over the last 4 years.
- Dryland cropland on average reported a lower rate of decline in the market value of land than irrigated cropland, grazing land, or hayland. Declines averaged between 2 to 5 percent depending upon the district. Dryland cropland without and with irrigation potential reported averages of \$3,100 and \$4,115 per acre.
- Gravity and center pivot irrigated cropland also noted a drop-in market values resulting in declines of 5 and 2 percent resulting in per acre averages of \$5,795 and \$6,145. The highest rate of decline for gravity and center pivot irrigated cropland ranging from 5 to 9 percent was reported in the Northwest, Central, and Southeast Districts. These regions are noted as having fairly restrictive water appropriations for irrigation according to panel members.
- Grazing land including tillable and nontillable, along with hayland, reported similar trends in the market value of land declining between 6 to 7 percent. Grazing land tillable or nontillable reported per acre averages of \$1,250 and \$835 along with hayland at \$1,710. The Central and East Districts reported the highest rates of decline at 10 and 11 percent with the deprived incentives for cropland development.

Figure 3. Historical Nebraska All Land Average Value per Acre and Marketing Year Average Price of Corn, Selected Years 1978-2018^{ab}

Source: ^a UNL Nebraska Farm Real Estate Market Surveys, 1978-2018.

^b World Agricultural Supply and Demand Estimates (WASDE), Office of the Chief Economist, USDA, 1978-2018. Preliminary Marketing Year Average price estimates for corn in 2017 and 2018.

- Farm real estate set the highest nominal or non-inflation adjusted price for the Nebraska all land average value in 2014 at \$3,315 per acre two years after recording setting marketing year average prices for corn and related commodities (Figure 3).
- Over the 40-year history of the UNL Nebraska Farm Real Estate Market Survey the report has documented substantial changes in the value of farm real estate. In recent history the Nebraska all land average value declined \$595 per acre from the high in 2014.
- Once again panel members ranked current crop and livestock prices as a negative factor influencing the value of land in 2018. Expectations for livestock prices did improve slightly as the ranking for this factor became less negative compared to 2017. Support provided to livestock prices through increased trade with China for beef remains critical in maintaining and growing demand for various meat products.
- Current and future property tax levels were the second and fourth most negative factors to agricultural land markets according to panel members. Landownership expenses in the form of property taxes remains a heavily debated topic in state-level public policy in 2018.

Table 2. 2018 Values and Recent Trends by Area of the State^a

Agricultural Statistics District	2018 All Land Average Value	1-Year Change	3-Year Change	5-Year Change
	Dollars/Acre	----- Percent Change -----		
Northwest	715	-5	-17	0
North	1,090	-7	-18	3
Northeast	5,395	-2	-12	-12
Central	3,165	-6	-20	-16

Southwest	1,650	-5	-20	-6
South	3,750	-3	-19	-16
Southeast	4,815	-1	-20	-11
Entire State	2,720	-4	-16	-11

Source: ^a UNL Nebraska Farm Real Estate Market Surveys, 2013, 2015, 2017, and 2018.

- Since 2013, the average market value of land in Nebraska declined 11 percent (Table 2). At 16 percent each, the Central and South Districts displayed the largest drop in the market value of land with a small gain in the Northwest District at 3 percent.
- Over the prior three years, the drop across the state in the market value of land averaged 16 percent. The Central, Southwest, and Southeast lead the state in declines each at 20 percent since 2015.

Table 3. 2018 Values and Recent Trends by Land Class in Nebraska^a

Land Class	2018 Average Value	1-Year Change	3-Year Change	5-Year Change
	Dollars/Acre	----- Percent Change -----		
Dryland Cropland				
No Irrigation Potential	3,100	-1	-9	3
Irrigation Potential	4,115	-3	-18	-22

Hayland				
All Classes	1,710	-6	-27	8
Irrigated Cropland				
Gravity	5,795	-5	-16	-15
Center Pivot ^b	6,130	-3	-16	-19
All Land	2,720	-4	-16	-11

Source: ^a UNL Nebraska Farm Real Estate Market Surveys, 2013, 2015, 2017, and 2018.

^b Value of pivot not included in per acre value.

- Dryland cropland with irrigation potential noted the largest 5-year change with a decline of 27 and 17 percent. Center pivot and gravity irrigated cropland also followed a negative trend at 18 percent (Table 3). Grassland nontillable reported a strong gain at 20 percent for the 5-year period.
- Land classes supporting the cow-calf industry including grassland and hayland reported the largest decline along with dryland cropland with irrigation potential for the 3-year change. Land classes serving the cow-calf industry peaked in 2015 in-line with recording setting cattle prices.

2018 Land Values Ranges

In addition to the estimated average value of land, panel members reported high and low grade quality levels for each land class summarized in Table 4. These averages create estimated quality value ranges for the different land classes in Nebraska.

Table 4. Average Reported Value Per Acre of Nebraska Farmland for Different Types and Grades of Land in Nebraska by Agricultural Statistics District, February 1, 2018^a

Type of Land and Grade	Agricultural Statistics District							
	Northwest	North	Northeast	Central	East	Southwest	South	Southeast
----- Dollars Per Acre -----

Low Grade	2,055	3,595	6,140	5,455	7,320	3,690	5,400	6,230

Source: ^a UNL Nebraska Farm Real Estate Market Survey, 2018.

^b Value of pivot not included in per acre value.

- According to panel members, the demand for high and low grade land remains tied to the district of the state for the property as shown in Table 4. The spread between high and low grade land tended to be highest for irrigated and dryland cropland classes compared to grazing or hayland.
- Larger rates of decline were reported in historically arid regions of the state in the Northwest and Southwest Districts for irrigated and dryland cropland. Panel members also indicated a high degree of concern among producers on the future allocations of water for irrigation purposes.
- Financial concerns expressed by panel members in the form of tight production margins coupled with rising long-term interest rates might be further capitalized in agricultural real estate markets, further applying negative pressure to the market value of low grade land.

2018 Net Rates of Return to Agricultural Land

The net rates of return to agricultural land give an estimate on the net income earning potential relative to the value of the asset. Table 5 reports the estimated net rates of return for dryland cropland, irrigated cropland, and grazing land in Nebraska.

Table 5. Estimated Annual Net Rates of Return by Type of Land and Agricultural Statistics District, Selected Years 2014-2018^{ab}

Type of Land and Year	Agricultural Statistics District								State Average
	Northwest	North	Northeast	Central	East	Southwest	South	Southeast	
----- Percent -----

2018	2.1	2.6	2.2	1.9	1.8	2.0	1.8	1.7	2.0

Source: ^a UNL Nebraska Farm Real Estate Market Surveys, 2014-2018.

^b Panel members reported estimates of annual net returns as percentage rates of current land values. Real estate appraisers refer to this percentage as the market-derived capitalization rate.

- In 2018, net rates of returns reported mixed changes across the state as districts reported slightly higher, unchanged, or lower averages in Table 5. On average, net rates of return to agricultural land remain historically low when accounting for current income and land ownership expenses for the investment.
- Landownership expenses in the form of property taxes remain a major influence on the net rate of return as noted by panel members. Land in surrounding areas might provide slightly higher rates of return due to lower landownership expenses.
- Once again, grazing land reported the lowest rates of return out of the three land classes reported by panel members. Irrigated cropland ranked first and dryland cropland second for the net rates of return in 2018.

Figure 4. Historical Estimated Annual Net Rates of Return by Land Type in Nebraska, Selected Years 1990-2018^a

Source: ^a UNL Nebraska Farm Real Estate Market Surveys, 1990-2018.

- For the 2018 reporting year, the net rate of return decreased by 0.1 percent for dryland cropland to 2.5 percent and irrigated cropland to 2.9 percent (Figure 4). Also, the net rate of return for grazing land remained unchanged at 2.0 percent.
- Interest rates in the United States marked a major change in fiscal policy as the Federal Reserve System raised short-term interest rates from historical lows. Short-term interest rates might be raised again later in 2018 by the Federal Reserve System. Alternative low-level risk investments might become more appealing than agricultural land given current net rate of return.
- Without significant changes in the earning potential or market value of agricultural land in Nebraska, the long-term trends in these capitalization rates may continue to trend negative to slightly unchanged. Property owners will look for changes in the fundamentals supporting the agricultural industry for future growth prospects in the net rate of return for the various land classes.

Factors Influencing Current Agricultural Land Markets

Many factors contributed to the changes in agricultural land values during 2018. Figure 5 ranks and summarizes these factors based upon panel members' observations on their influences on land markets.

Figure 5. Reporters' Rating of Factors Influencing Agricultural Land Values in Their Areas of Nebraska, February 2018

Source: UNL Nebraska Farm Real Estate Market Survey, 2018.

- Current crop prices, property tax levels, and farm input costs currently place the most negative pressure on land values according to panel members as shown in Figure 5. Additionally, future property tax policies and the financial health of current owners were the other economic factors in the top five adversely influencing area land values in Nebraska.
- For the second year in a row, the 1031 tax exchanges and non-farmer investor interest in land purchases were reported as the two most positive impacts on regional land values. The amount of land offerings for sale and purchase for farm expansion reported a positive, but negligible impact.
- Many other economic forces also ranked negative by panel members as influencing area land values, but the consensus among those reporting focused on the negative outlook on current property tax levels and challenges surrounding future property tax policies.

Characteristics of 2017 Land Market Transactions

Each year, panel members provide specific details on actual land transactions considered to be representative of their local markets. Panel members reported details on 505 farm real estate transactions for 2017 in Nebraska and these transactions are reported in Tables 6, 7, 8, and 9.

Table 6. Land Characteristics of 2017 Agricultural Real Estate Transactions, by Agricultural Statistics District in Nebraska

Agricultural Statistics District	Average Size of Tract	Average Percent Distribution			Average Price	
		Dryland Cropland	Irrigated Cropland	Pasture	Per Acre	Per Tract
	--- Acres ---	----- Percent -----			----- Dollars -----	
Northwest	898	14	8	78	852	764,498
North	1,178	4	3	94	1,097	1,292,408
Northeast	156	54	32	14	5,869	917,240
Central	189	10	54	36	3,862	729,708
East	106	51	39	10	6,663	708,515
Southwest	278	39	17	44	1,672	464,311
South	177	24	39	37	3,754	662,886
Southeast	146	46	34	20	5,087	743,979
State	222	31	23	46	3,512	778,406

Source: Based on 505 transactions which occurred across Nebraska during 2017 and reported in the UNL Nebraska Farm Real Estate Market Survey, 2018.

- The average parcel of ground sold in Nebraska during 2017 was 222 acres (Table 6). These sales equated to an average price of \$3,512 per acre or \$778,406 per parcel. On average, the higher priced per acre sales occurred in the Northeast and East District at \$5,869 and \$6,663 per acre. The lower priced per acre sales occurred in the Northwest and North Districts at \$852 and \$1,097 per acre.
- The Northwest and North Districts reported the largest average size tract of land sold in 2017 at 852 and 1,097 acres. Total pasture sales in the Northwest and North Districts composed 78 and 94 percent of total transactions reported for each region. The six other districts averaged closer to 100 to 200 acres except for the Southwest reporting an average of 278 acres.
- The largest increase in percentage of land sold by type from 2016 to 2017 was irrigated cropland pasture in the East District. For 2017, 39 percent of the land sold in the Northwest District was pasture compared to 23 percent in 2016.
- The largest decrease in percentage of land sold by type from 2016 to 2017 was dry cropland in the Central District. In 2017, 10 percent of the land sold in the Central District was dry cropland pasture compared to 27 percent in 2016.

Table 7. Types of Financing Associated with 2017 Agricultural Real Estate Sales, by Agricultural Statistics District in Nebraska

Agricultural Statistics District	Financing of Purchase			
	Cash Purchase	Mortgage	Contract For Deed	Other
	----- Percent -----			
Northwest	39	61	0	0
North	88	13	0	0
Northeast	36	61	1	2
Central	43	57	0	0
East	63	37	0	0
Southwest	32	63	5	0
South	63	37	0	0
Southeast	49	51	0	1
State	50	48	1	1

Source: Based on 505 transactions which occurred across Nebraska during 2017 and reported in the UNL Nebraska Farm Real Estate Market Survey, 2018.

- Lending rates in 2017 picked up as cash purchases decreased from 54 to 50 percent and mortgages increased from 40 to 48 percent of representative land sales reported in Nebraska according to Table 7.
- Contract for deed and other sources of financing decreased to negligible levels each at 1 percent. Cash purchases and mortgages remain the dominant forms of financing for land purchases.

Table 8. Percent Distribution of Agricultural Real Estate Transactions in 2017 by Buyer Type, by Agricultural Statistics District in Nebraska

Agricultural Statistics District	Type of Buyer			
	Active Farmer/Rancher	Local Non-Farmer	Non-Local Nebraska Resident	Out-of-State Buyer
	----- Percent -----			
Northwest	79	11	0	11
North	56	38	6	0
Northeast	72	23	3	3
Central	87	10	0	3
East	74	22	4	0
Southwest	84	0	11	5
South	84	0	16	0
Southeast	77	17	4	3
State	75	18	4	3

Source: Based on 505 transactions which occurred across Nebraska during 2017 and reported in the UNL Nebraska Farm Real Estate Market Survey, 2018.

- Purchases made by active farmers and ranchers led the buyer type purchasing land in Nebraska, accounting for 75 percent of transactions occurring in 2017 (Table 8). Nebraska residents, including local non-farmer and non-local Nebraska residents accounted for an additional 22 percent of land purchases in the state.
- Out-of-state buyers accounted for 3 percent of the agricultural sales reported by panel members. The Northwest District reported the highest proportion of sales by non-Nebraska residents at 11 percent.

Table 9. Percent Distribution of Agricultural Real Estate Transactions in 2017 by Seller Type, by Agricultural Statistics District in Nebraska

Agricultural Statistics District	Type of Seller					
	Active Farmer	Quitting Farmer	Estate	Local Non-Farmer	Non-Local NE Resident	Out-of-State Resident
	----- Percent -----					
Northwest	25	25	25	11	11	4
North	38	19	25	0	6	13
Northeast	14	5	53	13	8	7
Central	13	20	43	13	3	7
East	25	2	36	22	2	12
Southwest	11	32	47	5	5	0
South	26	16	32	11	5	11
Southeast	29	4	45	13	3	6
State	23	8	42	14	5	8

Source: Based on 505 transactions which occurred across Nebraska during 2017 and reported in the UNL Nebraska Farm Real Estate Market Survey, 2018.

- Active farmers, quitting farmers, and estate sales attributed to nearly 73 percent of the sellers for agricultural real estate sales during 2017 (Table 9). The remaining seller types were local non-farmer, non-local Nebraska resident, and out-of-state resident at 27 percent.
- Trends in 2017 for seller type remain in line with trends reported during 2016. Even with tight financial margins on many operations, active and quitting farmers did not report a large increase in the type of sellers marketing agricultural land for sale.
- Estate sales represent the highest rate of sellers marketing land at about 42 percent in 2017. With an aging land ownership population in rural areas, estate sales may continue to account for a large proportion of sales.

2018 Cash Rental Rates

Cash rental rates on average trended down across Nebraska for the 2018 production year. Table 10 summarizes average cash rental rates for 2018, percent changes from the prior year, and the high and low third quality grade averages.

Table 10. Reported Cash Rental Rates for Various Types of Nebraska Farmland and Pasture: 2018

Source: ^a Panel members reported estimated cash rental rates (both averages and ranges) from the UNL Nebraska Farm Real Estate Market Survey, 2018.

^b Cash rents on center pivot land assumes landowners own total irrigation system.

- On average, rental rates across the state for dryland and irrigated cropland along with grazing land trended down about 2 to 5 percent across Nebraska as shown in Table 10. Several districts reported a small percentage increase in cash rent, but these were only noted in a few districts for each land class.
- Productivity of the cropland including soil types, degree of slope, expected rain fall, and location all influence the competitiveness of rent paid in an area according to panel members. These differences by district provide the range and average paid in cash rent from the low to high third quality.
- The low third quality in rent for dryland and irrigated cropland dropped at a higher rate than the higher third quality suggesting demand for more marginal ground may be diminishing.
- Pasture on a per acre basis generally trended lower across the state with declines ranging from 3 to 8 percent except in the North and South Districts which noted small increases of 1 and 2 percent. Stocking rates, geographical attributes, and range quality influence the reported per acre rental rates.

Table 11. Reported Cash Rental Rates for Pasture on a Monthly Rate Basis for 2018: Averages and Ranges by Agricultural Statistics District^a

Type	Agricultural Statistics District							
	Northwest	North	Northeast	Central	East	Southwest	South	Southeast
----- Dollars Per Month -----

Low Third Quality.....	18.90	27.15	29.85	25.35	31.00	28.15	29.00	26.60

Source: ^a Panel members reported estimated cash rental rates (both averages and ranges) from the UNL Nebraska Farm Real Estate Market Survey, 2018.

^b A cow-calf pair is typically considered to be 1.25 to 1.30 animal units (animal unit being 1,000 lb. animal). However, this can vary depending on weight of cow and age of calf.

- Changes in cow-calf and stocker rental monthly rental rates were mixed when compared to 2017 (Table 12). Nebraska monthly grazing rates represent a typical fee for one month of grazing during the summer. Many leases run for a five-month grazing season subject to annual weather conditions.
- Contractual provisions such as maintaining fences, weed control, and checking or providing water during the grazing season may increase or decrease the rental rate of the lease depending upon the landlord or tenant's willingness to provide these services. Panel members noted these factors influence the negotiated rental rates in addition to the quality of the property as shown by the reported averages.
- In addition, panel members also reported concern in grazing land leases due to potential drought in 2018. Provisions in grazing land leases addressing adverse weather-related events need to be reviewed by the appropriate agency or organization providing disaster related programs for pasture or range to ensure the property may be eligible in the event of drought.

Special Feature: 2018 Cash Lease Adjustments on Irrigation Equipment for Cropland Rental Arrangements in Nebraska

Each year the special feature section covers topics on new or emerging issues related to agricultural land in Nebraska. These topics reflect interest expressed by panel members and readership of the *Nebraska Farm Real Estate Market Highlights Reports*. The special feature section in 2018 focuses on cash lease adjustments on irrigation equipment for cropland rental arrangements in Nebraska. Results from this special feature section of the survey are summarized in Figure 6, 7, and Table 12.

Nebraska utilizes irrigation systems across the state on cropland acres for grain and forage production. These systems require large financial outlays for purchasing and installation of the irrigation equipment. Repairs and maintenance are required for upkeep on the system each year. Landlords and tenants commonly negotiate the maintenance on irrigation equipment on rented cropland. Figure 6 summarizes the entity responsible for annually maintaining and repairing irrigation systems as part of a cash lease contract.

Figure 6. Entity Responsible for Maintaining Irrigation System as Part of Cash Lease Arrangement in Nebraska

Source: UNL Nebraska Farm Real Estate Market Survey, 2018.

- In Figure 6 panel members reported the entity responsible for maintaining an irrigation system as part of cash lease arrangement in Nebraska for 2018. Ranked in order of which entity maintains the system includes the landlord & tenant, tenant, landlord, and other at 48.4, 34.7, 14.7, and 2.2 percent.
- In cases where tenants were solely responsible for maintaining the system a discount on the cash rent paid for the irrigated cropland might be made to account for the investment of time and repairs. In certain instances, panel members indicated the landlord may still be responsible for repairs after a tenant met a certain monetary deductible for repairs on the system.
- The skill, interest, and time of the landlord and tenant engaged in an irrigated cropland lease arrangement have a strong influence on the negotiations for which entity maintains the system necessary for delivery the water across the parcel of ground.

A tenant might pay for the replacement of a pivot on irrigated cropland after an older system becomes depreciated out or functionally obsolescent and the landlord does not have the financial ability or interest due to age. Figure 7 accounts for the discount on irrigated cash when the tenant provides the center pivot.

Figure 7. Discount on Cash Rent per Acre When Tenant Owns Pivot for Irrigation System in Nebraska

Source: UNL Nebraska Farm Real Estate Market Survey, 2018.

- According to Figure 7, the discounts of \$26 to \$50 and \$10 to \$25 per acre account for 58.5 and 30.6 percent of the discounts on cash rent when the tenant owns the center pivot. About 8.5 percent of discounts are greater than \$51 per acre and 2.4 percent account for a discount of \$0 per acre.

The other major irrigation system component a tenant might bring to a cash lease agreement could be a diesel engine, propane or natural gas engine, or electric motor. Table 12 reports the discounts per acre when the tenant owns the power unit for the irrigation system.

Table 12. Discount on Cash Rent per Acre When Tenant Owns Power Unit for Irrigation System in Nebraska

Power Unit	Discount per Acre			
	\$0	\$1 to \$9	\$10 to \$20	\$20+
----- Percent of Respondents -----				
System Type				
Diesel Engine	23	34	35	8
Propane or Natural Gas Engine	23	43	31	3
Electric Motor	20	42	26	12

Source: UNL Nebraska Farm Real Estate Market Survey, 2018.

- About 70 percent of the discount per acre rates for the three power units were divided between\$1 to \$9 and \$10 to \$20 (Table 12). About 20 percent of irrigated cropland did not receive a discount and a very small percent have a discount greater than \$20 per acre.
- Panel members reported newer diesel, propane, or natural gas engines might have higher discount rates due to the expenses associated with complying with the emissions standards on these power unit exhausts.

Statistical Appendix

Source: ^a Revised from series reported in earlier reports. Refers to year ending March 1 for years prior to 1976; year ending February 1 for years 1976-1981; year ending April 1 for years 1982-1985; year ending February 1 for years 1986-1989; year ending January 1 for years 1990-1994; mid-year 1995-1997, and year ending January 1, 2000.

^b Computed by dividing the USDA average value per acre by the 1st Quarter GDP Price Deflator (2018 = 100) and multiplying by 100.

^c A positive value entry in this column represents a real increase in asset value for the year (i.e., the rate of land value appreciation exceeded the general rate of inflation for the U.S. economy). Conversely, a negative value entry represents a real decrease in asset value.

^d Preliminary.

2018	715	1,090	5,395	3,165	6,240	1,650	3,750	4,815	2,720

Source: ^a Average reported from the UNL Nebraska Farm Real Estate Market Surveys, 1978-2018.

^b Weighted average based upon acreage in each land type.

^c Pivot not included in per acre value.

^d All land average for the state may not conform to USDA series due to different acreage weighting. In addition, the USDA series includes farm buildings in the per acre estimates of value.

Source: ^a Panel members reported annual estimates of net rates of return in the annual UNL Nebraska Farm Real Estate Market Surveys, 1990-2018.

^b Panel members reported estimates of annual net returns as percentage rates of current land values. Real estate appraisers refer to this percentage as the market-derived capitalization rate.

Source: ^a Panel members reported annual estimates of cash rental rates in the annual UNL Nebraska Farm Real Estate Market Surveys, 1981-2018.

^b Insufficient number of reports.

^c A cow-calf pair is typically considered to be 1.25 to 1.30 animal units. However, this may vary depending on weight of cow and age of calf.
